

Baust... Solutions for a better profit

Continuous product development and custom-made solutions.

Often it is not the well-trodden paths that lead to success, but rather those individual tracks, the ones you take to find new solutions, which move you and your company forward and provide you with tangible market benefits. Baust has specialised in engineering material flow systems and innovative punching technologies for generations. Constantly developing new products is our passion – putting your requirements into practice with a high degree of precision is what we do best. The finding of individually tailored solutions is the constant driving force behind everything we produce. We know how to meet your technical specifications flawlessly and at the highest standard. Our solutions ensure you of economical and highly reliable systems wherever goods need to be transported or state-of-the-art punching technologies are required. Just hold us to our word – go ahead and challenge us!

Baust material flow systems – technologies for greater efficiency.

Even the best products are no use to a company if production flows are stagnating due to slow logistics. Baust offers you reliable and innovative systems for efficient logistics which increase your profitability in the long term. We develop material flow systems individually tailored to suit your requirements with extensive engineering based on a large module system. Economical, long-lasting and reliably designed to withstand continuous use – our systems ensure your production continuously delivers maximum performance.

Baust punching technology – solutions for a better profit.

Expertise and innovation in punching technology: already in its second generation, Baust stands for peak performance and forward-looking ideas in the field of punching technology. We develop state-of-the-art rotary punching equipment for processing continuous materials and thereby provide you with the basis for an efficient, highly automated, reliable process capable of meeting individual requirements.

We increase your productivity through precise engineering.

Our foremost aim is your ultimate satisfaction and success – and that's why we never stand still, but keep moving forward in systematic steps, together with our customers. Our key objective is to meet your requirements with the greatest possible precision – and that is the force that drives us on to keep developing and enhancing our products. We combine comprehensive knowledge of the industry with specific expertise and are fully aware of all the details involved in your manufacturing processes. Our high skill in development together with our ability to specifically drive innovation means we always arrive at solutions optimally suited to you and your goals. Our high innovative strength has revolutionised punching technology and virtually perfected our material flow systems. You benefit from the simple fact that our systems optimise your manufacturing processes, maximise production speed and ultimately increase your profitability in a tangible way. This means extremely efficient, powerful solutions that guarantee you key technological advantages.

**Determined and customer-orientated,
that's how we create value.**

Your wish is our benchmark. In the course of product development we create innovative, custom-made, functional, reliable systems that meet your special requirements. We apply our industry know-how exactly there where it is required: in optimising processes and in raising profitability in the field of goods logistics, as well as in punching technology for the manufacture of continuous materials. Our experience in developing customer-specific solutions makes us your reliable partner focused on continuity. If it is physically feasible, we can design it for you. Put our performance to the test!

We are a family-run company, stability is very important to us.

State-of-the-art technologies and continuous improvement in all fields of business make Baust highly efficient and a major player in both the German and the international market. In us you have found an expert who believes in high quality and comprehensive expertise. Whether solutions for material flow systems or punching technologies are required, Baust is the first choice.

As a traditional, owner-managed company, we are a global team player and link economic prosperity with social commitment. We rely on competent, specialised staff and promote increased efficiency, enthusiasm and job satisfaction by means of regular further training. Because every continual success is created through human endeavour.
